NAAN MUDHALVAN PROJECT

SCRIPT-CONTROLLED ACL – RESTRICT RECORD ACCESS BASED ON FIELD VALUE

6. Project Testing Phase

Testing Objective

Verify that the ACL grants access only when the field-based condition is satisfied and blocks access otherwise.

Test Case 1 – Allowed

Use a record whose field value satisfies the configured rule. Expected result: the authorized user can access the record.

Test Case 2 – Denied

Use a record whose field value does not satisfy the rule. Expected result: access is denied.

Test Case 3 – Different User

Test with a user who does not meet the access condition. Expected result: restricted access remains blocked.

Test Case 4 – Boundary/Invalid Value

Test an empty, unexpected, or boundary field value. Expected result: the ACL follows the defined safe access behaviour.

Test Result

Record the actual result, expected result, pass/fail status, and supporting screenshots for every test case.
