NAAN MUDHALVAN PROJECT

SCRIPT-CONTROLLED ACL – RESTRICT RECORD ACCESS BASED ON FIELD VALUE

7. Project Documentation Phase

Documentation Objective

Prepare a clear record of the project from problem identification through testing and final outcome.

Project Overview

Document the project title, problem statement, objective, scope, proposed solution, and expected outcome.

Technical Documentation

Include requirements, ACL design, field-based logic, configuration steps, script explanation, data flow, and security considerations.

Testing Documentation

Include test cases, expected results, actual results, pass/fail status, and screenshots of important verification steps.

Repository Documentation

Organize the eight phase documents and project evidence in GitHub so that each phase is easy to identify and review.

Conclusion

Summarize how the script-controlled ACL restricts record access according to the selected field value.
