NAAN MUDHALVAN PROJECT

SCRIPT-CONTROLLED ACL – RESTRICT RECORD ACCESS BASED ON FIELD VALUE

8. Project Demonstration Phase

Demonstration Objective

Demonstrate the complete working flow of the field-based ACL and show the difference between permitted and restricted record access.

Step 1 – Introduction

Introduce the project title, problem, objective, and why field-based record access control is required.

Step 2 – Configuration

Show the target table, relevant field, ACL configuration, and the scripted access condition.

Step 3 – Successful Access

Log in or use an authorized test context and show a record whose field value satisfies the rule.

Step 4 – Restricted Access

Use a record/user combination that does not satisfy the condition and demonstrate that access is denied.

Step 5 – Testing Evidence

Present the main test cases and screenshots, then explain the observed results.

Final Outcome

Conclude by showing that the project implements field-based record restriction through a script-controlled ACL.
